Administration saved per day

Innovation that Drives Value

Chevin is constantly investing in product development to help fleet professionals maximise their ROI. Below are just some of the latest innovations engineered for exceptional fleet performance.

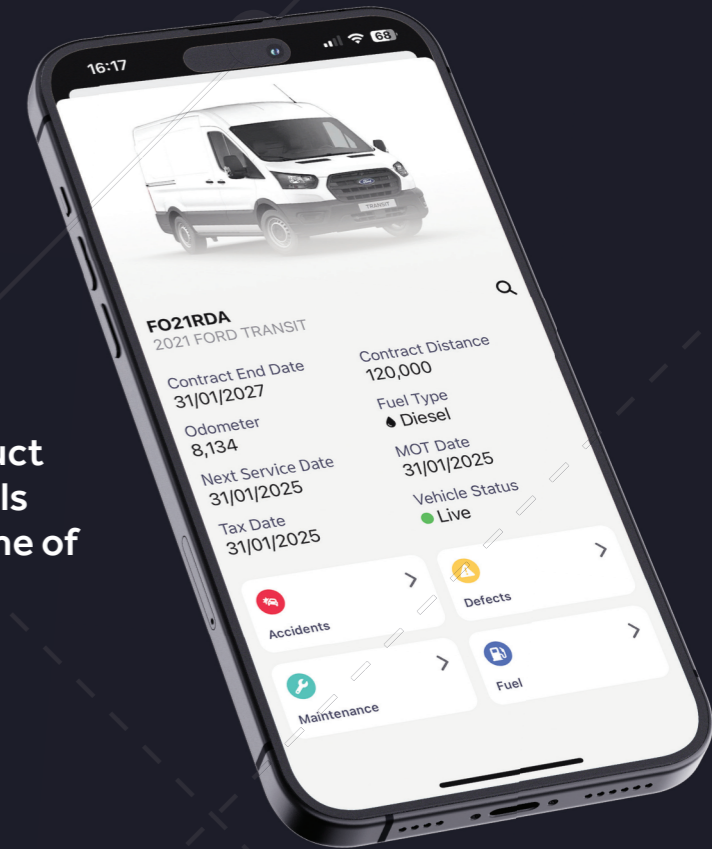

[Request Demo](#)

Automation on the go

With **SmartForms** users can design bespoke forms with automated workflows to ensure data quality and best practice across the operation.

The **FleetWave Driver** app lets drivers easily log journeys, report incidents and request maintenance from their mobile device. With real-time data, drivers stay compliant, operate safely, and remove manual paperwork.

The **FleetWave Technician** app helps maintenance teams track vehicle health, schedule maintenance, and manage parts. This centralised system keeps repairs timely and downtime minimal, improving overall fleet reliability.

Unlocking fleet potential

With **Smart Integrate**, integration is no longer a challenge – it's your opportunity to take full control of your fleet data, streamline operations, and unlock smarter, faster decisions.

Smart Integrate empowers users to build and manage API connections, in a simple and efficient manner, without relying on costly and custom development.

Unlock best practice with **FleetWave Store** and benefit from off-the-shelf tools, reports and integrations, giving instant insight into performance, costs, and trends for smarter, data-driven decisions.
